

CUSTOMER ANALYTICS BRIEFING

Customer shopping behavior is a growth question

Use transaction data to understand who spends, what sells, and which levers unlock retention and lifetime value.

Executive Readout • Power BI Portfolio Review • 2026

The business needs sharper answers from everyday purchases

- 1 Which customers drive revenue?
- 2 Which categories and products deserve more attention?
- 3 Where can subscriptions, loyalty, and discounts improve lifetime value?

3,900 purchases create a practical decision base

Data integrity and robust feature engineering ensure the Power BI model reflects genuine behavioral drivers rather than statistical noise.

3,900

Customer transactions

18 structured fields per record

Captures complete purchase logs across individual shopper IDs, item SKUs, transaction values, payment channels, and geographical touchpoints.

7 Core

Behavioral signal streams

Full consumer journey visibility

Tracks demographics, product categories, basket spend, discount application, shipping methods, customer review ratings, and historical purchase frequency.

100%

Cleaned and modeled data

Engineered for analytical rigor

Missing review ratings imputed using product-category medians; shopper cohorts bucketed into standardized age tiers and discrete purchase-cadence segments.

SOURCE • Transaction dataset preparation log, 3,900 verified consumer orders

SO WHAT

A rigorously cleansed dataset gives merchandising and marketing leaders confidence to act on specific segment findings rather than high-level intuition.

Male customers generate more than twice the female customer spend

TOTAL PURCHASE AMOUNT BY GENDER (USD)

SOURCE • Transaction purchase logs, N=3,900 customers

Spend breakdown

Male spend	\$157,890
Female spend	\$75,191
Combined	\$233,081
Male share	67.7%

The 2.1× spend gap reveals that male buyers either purchase at significantly higher transaction volumes, choose higher-priced categories, or respond more readily to default assortment paths.

SO WHAT

Protect the male core with streamlined reordering while diagnosing female drop-off across category mix, sizing range, and targeted campaign creative.

Young adults lead spending, but the customer base is broadly valuable

Spend contribution is remarkably balanced across all generations, meaning broad commercial viability without over-reliance on a single demographic.

26.7%

Young Adult

Leading cohort share

Paces total spend through higher digital engagement, trend sensitivity, and mobile-first checkout behaviors.

25.4%

Middle-aged

Core stability segment

Demonstrates stable multi-item baskets, consistent seasonal reordering, and lower overall return sensitivity.

24.0%

Adult

High purchasing power

Represents mature purchasing power with steady demand across premium apparel lines and essential accessories.

23.9%

Senior

Reliable customer base

Nearly identical aggregate value to adults; highly brand-loyal with lower discount dependence.

SOURCE • Power BI demographic customer model, engineered age cohorts

SO WHAT

Prioritize young adults; keep the catalog broad: other cohorts generate 73.3% of enterprise revenue

Made with GAMMA

Clothing is the volume engine in the Power BI view

SALES BY PRODUCT CATEGORY (APPROXIMATE UNITS)

SOURCE • Power BI sales breakdown across 3,900 purchase events

Category leadership

Category	Sales	Revenue
Clothing	~1,700	~\$100K
Accessories	~1,300	~\$74K
Footwear	~600	~\$36K
Outerwear	~300	~\$23K

Clothing generates nearly double the unit volume of Footwear and Outerwear combined, anchoring store traffic and digital checkout momentum.

SO WHAT

Prioritize Clothing for hero campaigns and supply chain buffer, while attaching Accessories at checkout to increase total order margin.

Loyalty is strong; subscription adoption is the next unlock

LOYALTY MIX

3,116

Loyal customers

Returning: 701 · **New:** 83

SUBSCRIPTION ADOPTION

27%

Subscribers

73% are not subscribers

Revenue signal: Non-subscribers generate more total revenue because they are the larger base, while average spending is nearly identical across groups.

Loyalty is strong; subscription adoption is the next unlock

01

Segment 01

3,116

Loyal buyers

The core customer asset driving base stability.

02

Segment 02

701

Returning

Proven repeat intent; ripe for retention cadences.

03

Segment 03

83

New buyers

First-touch purchasers needing onboarding prompts.

While 3,116 customers demonstrate habitual loyalty, only **27%** have converted to formal subscription memberships, leaving **73%** on ad-hoc reordering paths.

Subscription adoption gap		
Metric	Subscriber	Non-sub
Customer share	27%	73%
Average spend	~\$59.50	~\$59.80
Total revenue	~\$63K	~\$170K
Average basket spend is virtually identical across both groups. Non-subscribers generate more total revenue solely because they represent nearly three-quarters of the base.		

SOURCE • Power BI customer loyalty and subscription conversion audit, N=3,900

SO WHAT

Convert even 10% of the 3,116 loyal non-subscribers to secure predictable recurring cash flow without sacrificing per-order basket spend.

Made with GAMMA

What the Power BI report makes actionable

See the mix

Revenue, sales, category performance, age-group contribution, subscriptions, and ratings in one view

Filter the opportunity

Use gender and customer segments to move from averages to targeted action.

Turn insight into cadence

Refresh the dashboard as campaigns, products, and retention programs change.

Five moves to convert insight into growth

Measure progress through subscription conversion, repeat purchase rate, category sales, average rating, and contribution margin.

1. Boost subscriptions with clear, exclusive benefits.
2. Reward repeat buyers and move more customers into the Loyal segment.
3. Review discount policy to balance conversion with margin.
4. Feature top-rated and best-selling products in campaigns.
5. Target high-revenue age groups and express-shipping users with tailored offers.
